PENDANTS

We cut the profiles to the desired length in-house. We can handle any length between 250 mm and 6 meters. We can also adjust the colour based on the project requirements.

UNIQUE IN EVERY WAY

Does our standard product range not meet your requirements? We will always gladly suggest a suitable product for your needs. We can make simple adjustments to existing features such as colour or size. However, we are open to more complex challenges too. We design fixtures specifically tailored to your requirements. The luminaires from our collection are custom-made and assembled in our social and in-house workshops. We do this in the Netherlands. This enables us to choose from an extensive stock of lighting components.

LET'S BE CREATIVE

Any of our existing parts can be used when creating a brand new design. Should special parts be required, we can quickly and easily have them made by our large network of suppliers. As a result of this approach, we can offer a complete package. There is a wide selection of products, from assorted to custom-made, at competitive prices.

MIYO
Make it your own.

CUSTOM MADE

MAKE IT YOUR OWN! (MIYO)

We solve customer problems by making customised luminaires. MIYO can do that competitively because we try to use as many existing Illuxtron components as possible. We select and combine products, only manufacturing what we don't have in stock.

WHY WE ARE GOOD AT IT

At Illuxtron, we assemble our luminaires locally. The biggest advantage is that we can customise the product without having to disassemble it first. We also work with local partners to quickly solve specific customer challenges.

- We have a powder coating partner nearby.
- A CNC metalworking company is located in the same building.
- Our sheet metal partner is just one hour away.
- The social workshop is only a 10-minute walk away.

This gives us Flexibility and Speed!

WHY MIYO

At Illuxtron we are creating standard products that are competitive and innovative for a wide audience. We create our own parts and technologies for our luminaires. But sometimes you need something more, something different... Something special. That's where MIYO comes in.

FIONA SPOT

Spotlights with MR16 halogen lamps are still used in countless applications. With the phase-out of halogen lamps, LED lamps have become available as replacements, but they have a limited lifetime.

We created a replacement spotlight for a European restaurant chain using the latest technology. For quick installation, the ceiling plate is custom-made to fit the existing bracket. The entire system is controlled by a DMX system.

Examples of “making it your own”

TRIMLESS FIDO

The standard Fido version has been transformed into a trimless version for Gyproc ceilings.

CNC milled ring +
laser cut frame

Standard Fido +
bajonet ring

MULTIPLE AR111 REPLACEMENT

These luminaires were very popular since 1990. Due to the phasing out of these lamps, many fixtures are now equipped with AR111 LED lamps that have a relatively short lifetime. A better solution, however, is to replace the entire fixture and adapt it to modern control systems (deep dimming, DALI, Casambi, etc.).

TWIN STRADA

In 2025, we made several luminaires for a high-end hotel of one of the largest amusement parks in Europe. We used customized colours and higher light outputs, and we even developed completely new product models in relatively small quantities.

ODION PI-LED

This downlight is assembled to order in the Netherlands on our social workshops. Next to the standard variations we have made a special adapter housing for 2CH and 3CH solutions.

LINEAR FIXTURES

Options for diffusers or various reflector cups are available, including recessed, surface-mounted, and pendant versions.

STRADA**

The image shows a bright, modern interior space, likely a laboratory or office. In the foreground, there is a long white table with a blue top and white drawers. The background features glass partitions and a wooden ceiling with linear lighting fixtures. A white circular overlay contains text about the project.

Location: Utrecht, Netherlands

Lighting: Cortina, Vesper, and
custom-made linear lighting

Datacenter specials

LINEAR LINE

Special energy-efficient luminaire aimed at data centers. It can be mounted directly on a cable duct via a handy suspension system. As a possible pendant variant, it can also be attached to the ceiling with hanging wires.

CUSTOM MADE

Both can be connected the same way

EMERGENCY LUMINAIRE

A standalone IP65 luminaire with a wide beam angle, delivering 318 lm for up to 3 hours. It can be connected to a cable trunking system in the same way as the Linear Line.

ODION SPOT

A cable basket holds the Odion Trackspot's head in place. It is a cheap way to light up your (industrial) project with a lumen output of 6300Lm.

SUSTAINABLE LINEAR LIGHT

At the end of its lifespan, this luminaire can be equipped with new technology. After retrofit a 7-year warranty can be offered again. The optics are available in different beam widths including an asymmetrical version.

FLAT CABLE

The Flat Cable is the quickest option if you need to complete your installation quickly. The 5-pole tap off's can be assembled by Illuxtron at any location and any length you desire.

ILLUXTRON®
LIGHTING

LIGHTING SOLUTIONS TAILORED TO YOUR PROJECT

At Illuxtron, we combine over 50 years of lighting experience with innovative product development, custom-made solutions and practical project support. Together, we create lighting that performs, inspires and integrates seamlessly into every environment.
